Delivering Quality since December 31, 1997
Release of Python 1.5

- Deprecated old module 'regex', based on Perl-style patterns.
- 'regex' finally removed in Python 2.5 (September 19, 2006)

Answer for questions:

- "Does this string match the pattern?"

- "Is there a match for the pattern anywhere in this string?"

Answer for questions:

- "Does this string match the pattern?"

- "Is there a match for the pattern anywhere in this string?"

- Replace part of it

- Split into pieces

re is handled as string - there is no special syntax for expressing it (advantage and disadvantage)

re is handled as string - there is no special syntax for expressing it (advantage and disadvantage)

re patterns are compiled into bytecode

Regex Example
The Dragon

re is handled as string - there is no special syntax for expressing it (advantage and disadvantage)

re patterns are compiled into bytecode

re module is a C extension module (like `socket` or `zlib`)

re language is relatively small and restricted

- not all possible string processing tasks can be done
- some of them can be done, but expression would be very complicated

regex 2015.09.28	9	Alternative regular expression module, to replace re.
regex 2015.11.05	9	Alternative regular expression module, to replace re.
regex 2015.11.12	9	Alternative regular expression module, to replace re.
regex 2015.11.08	9	Alternative regular expression module, to replace re.
regex 2015.11.09	9	Alternative regular expression module, to replace re.
collective.regexredirector 0.2.3	7	Addon for plone.app.redirector concerning regex redirector
commonregex 1.5.4	7	Find all dates, times, emails, phone numbers, links, emails, ip addresses, prices, bitcoin address, and street addresses in a string.
hachoir-regex 1.0.5	7	Manipulation of regular expressions (regex)
json-regex-difftool 0.2	7	A tool for doing a comparison or difference of JSON documentswith regular expression support
pyregex 0.5	7	a command line tools for constructing and testing Python's regular expression
pytest-raisesregexp 2.0	7	Simple pytest plugin to look for regex in Exceptions
QRegexEditor 0.5.1	7	PyQt regex editor
range-regex 1.0.4	7	Python numeric range regular expression generator
regex2dfa 0.1.9	7	regex2dfa
regexdict 0.0.1	7	Regex Dict
RegexTester 0.5	7	Python online regex tester for Python 2.7+
boost_regex 0.57	6	Very basic interface to the boost regex library.

Wrapper for Google RE2 engine
Prerequisites for re2 in Python:

- RE2 library from Google

- Python development headers

- build environment with g++

PyPI
re2
re2 by Facebook
re2 by Axiak
Why re2?

Released in April 2015. In development since 2010.
Features

- `fullmatch` works like `match` but anchors the match at both the start and the end
- `test_(search|match|fullmatch)` methods that work like `(search|match|fullmatch)` but only returns `True` or `False`

Under the hood
Beginning
Features
Competition
Wrap-up
Backup

PyPI
re2
re2 by Facebook
re2 by Axiak
Why re2?

Missing Features

- no substitution methods
- no flags
- no `split`, `findall`, `finditer`
- no top-level functions like `search` or `match`; just use compile
- no compile cache
- no `lastindex` or `lastgroup` on `Match` objects

Under the hood

Competition
Wrap-up
Backup

PyPI
re2
re2 by Facebook
re2 by Axiak
Why re2?

Initially fork of Facebook version, later rewritten from scratch.
Features

- Backward compatibility

```
try:
    import re2 as re
except ImportError:
    import re
```

`re2` will automatically fall back to the original `re` module if there
is a regex that it cannot handle: `re2` doesn't handle lookahead
assertions `(?=...)`.

Backup

PyPI
re2
re2 by Facebook
re2 by Axiak
Why re2?

Missing Features/Flaws

- Unicode support: module supports UTF8, so automatically encodes and decodes any unicode string.

`re.LOCALE, re.L`
Make \w, \W, \b, and \B, dependent on the current locale
instead of the Unicode database.
Do not use.
Deprecated in Python 3.5, will be removed in version 3.6
